

AUTOBLAST

A Diamond Product

The Autoblast Blasting System is constructed for extreme duty with a totally welded frame with heavy duty steel panels. These panels are then lined with 1/4" blast resistant rubber for heavy duty abrasive blasting and continuous use.

The Autoblast Blasting System allows for complete remote-in service for software updates and system maintenance to the machine.

The Autoblast Blasting System offers circle-motion blasting for precision, depth, and speed of blasting different surfaces.

The Autoblast Blasting System offers straight line, or traditional blasting, for blasting over smaller letter areas or to panel frost.

The lighting in the Autoblast Blasting System is one of a kind. Each room is equipped with a patented lighting system that allows for over 22,000 Lums per room, offering high visibility while blasting.

AUTOBLAST OPTIONS

The Autoblaster Blasting System is offered in 2 different options for blasting needs. Option One offers the complete Autoblaster Blasting System with traditional, manual operation of abrasive with an in-ground pit. Option Two offers the complete Autoblaster Blasting System with the full abrasive recovery system. This system allows for zero time associated with anything abrasive recovery and sifting.

CAPABILITIES

The Autoblaster computerized automatic machine has multiple blasting styles and capabilities. Circle Motion blasting for precision, depth, and speed. Straight line, or traditional blasting, to go over smaller lettering areas and/or panel frosting.

ABRASIVE RECOVERY

Other curtains state that abrasive is screened and automatically collected with no down-time for the reclaiming of abrasive. The Wenzco Autoblaster is the only machine that truly has no down-time for abrasive recovery. Once the abrasive is introduced into the Autoblaster Blasting System, until the point it is removed by the dust collection system, it is completely recycled. The blast pot self reclaims and self fills during blasting operations. There is no down-time in waiting for a blast pot to re-fill.

Make The Best Purchase For Your Requirements
Here are some questions to ask if you plan to purchase an automatic machine other than the Wenzco Autoblaster Machine to verify the information that you receive in literature.

When purchasing another machine that states that they have no down-time, be sure to ask: do you at any one point while the machine is operating, have to shut down the sandblast pot and decompress the pot in order for blasting media to re-fill it?

Is it contained between the reclaiming top above the blast pot and the bottom, or is there ability for dust to penetrate the air due to there being an air open space gap between the filler and the reclaiming?
